By placing this order you agree to AgencyHub's Terms and Conditions and Privacy Policy.

THE FINDING

The agency is not the end customer.

Digital agencies resell work they do not perform. They buy SEO, content or PPC from white label providers, add a margin, and deliver it to their own client. AgencyHub is where that transaction happens: providers list, the platform verifies them, agencies buy and resell.

An agency often cannot pay until its own client pays them first. That client **has no account and never enters the platform**, yet puts up the money, supplies the requirements and judges the result.

ACTOR	IN THE APP	WHAT THEY DO
Provider	Yes	Lists, delivers, gets paid
Agency	Yes	Buys, sets the price, resells
End client	No	Pays, supplies requirements, approves

Every screen had to answer one question: what happens when the person paying is not the person looking?

The checkout has two endings, not three payment methods.

A checkout assumes the buyer pays. Here the agency often needs its client to pay first, so three payment options at the same level never held up: the payment link pays nothing and creates a **waiting for client** state, and the balance is a discount, not a method.

The shipped design has two outcomes, *Pay now* and *Ask your client to pay*, with the balance as a checkbox that comes off the total. The button changes with the outcome: **Pay \$250.00** or **Create & Send Payment Link**.

The screenshot shows the AgencyHub Checkout interface. On the left is a sidebar with navigation links: Dashboard, Marketplace, Client Hub, Orders, My Store, and Payments. The main content area is titled 'Checkout' with the subtitle 'Review your order and choose how it gets paid.' Below this, under the heading 'How does this get paid?', there are two radio button options. The first option, 'Pay now with Visa **** 4242', is selected and includes the text 'Expires 08/28. Your order starts as soon as payment clears.' The second option, 'Ask your client to pay', includes the text 'We'll send Acme Corp a secure payment link. Your order starts when they pay.' Below these options is a section for 'Apply credit' with a checked checkbox for 'Use my account balance (\$150.00 available)'. On the right side, there is an 'Order Details' table showing the following items:

Order Details	
Price	\$300.00
Setup Fee	\$100.00
Taxes	\$0
Discount	\$0
Account balance	-\$150.00
Total due	USD \$250.00

Below the table is a large dark button labeled 'Pay \$250.00'. At the bottom right, there is a small disclaimer: 'By placing this order you agree to AgencyHub's Terms and Conditions and Privacy Policy.'

02

DECISION

Each side sees its own price.

The agency needs margins it can defend. The provider needs its price protected from markups that break the client's expectations. Full transparency sounds honest, but it turns the agency into a middleman with a visible markup.

The provider never sees the client price. The client never sees the provider cost. The platform sees both, which is what lets it settle a dispute.

The margin lives inside the checkout: a `Client price` field with the markup calculated live, *"Your cost \$400.00 · You earn \$200.00"*, plus a default markup in settings so pricing is not a decision made from scratch on every order.

One cart, one client.

If the cart mixed SEO for client A with PPC for client B, the payment link would have no valid recipient: one link, one payer. So the cart is scoped to one client, chosen up front and visible throughout.

Buying for three clients means three orders: acceptable friction, because sending a payment link to the wrong person cannot be undone.

One room, two identities.

Communication lives in a space attached to the order. With three actors, the question is whether the client gets to see the provider. Yes, but as part of the agency's team: the platform does not hide the provider, it relabels them.

The agency is betting its client relationship on that relabelling, so it can preview the conversation exactly as its client sees it before writing anything sensitive.

The screenshot displays the AgencyHub Messages interface. On the left is a sidebar with navigation links: Dashboard, Marketplace, Client Hub, Orders (highlighted), My Store, and Payments. The main area is titled 'Messages' with a subtitle 'Every conversation lives inside the order it belongs to.' and a top bar showing '\$150.00' and various icons. The conversation is for 'Web Design for Beta Ltd' (Order #34211) and is marked 'In progress'. A yellow banner indicates a 'White label collaboration' where 'Beta Ltd sees Alex K. as part of Adams Media. Your cost and AgencyHub stay hidden.' with a 'Preview as client' link. The message history shows: Alex K. (Provider) at 09:12 stating 'I've mapped out the site structure. Wireframes for the homepage and two inner pages land Thursday.'; Sarah A. (Adams Media) at 09:21 asking 'Great, Marcus, can you confirm the brand colours and send over the logo files?'; Marcus Bell (Beta Ltd) at 09:24 replying 'Just uploaded them to the requirements form. Tell me if anything is missing.'; and Alex K. (Provider) at 09:28 replying 'Got them. Starting on the homepage today.' A 'Write a message...' input field and a 'Send' button are at the bottom. On the right, the 'Participants' section lists Alex K. (Provider), Sarah A. (Adams Media), and Marcus Bell (Beta Ltd). Below this, the 'Order #34211' details show 'Service: Web Design', 'Your cost: \$1,200.00', 'Client price: \$1,800.00', and 'Placed: Aug 28, 2024', with a 'View order details' button. The 'Activity' section lists: 'Order placed' (Aug 28, 10:02), 'Client paid \$1,800.00' (Aug 28, 11:15), 'Requirements submitted' (Aug 29, 09:40), 'Work started' (Sep 1, 09:10), and 'Delivery and review' (Upcoming).

THE PROOF

The screen that proves all of it.

What the agency's client sees when they open the link: no account, no session, no idea what AgencyHub is.

- **The agency's brand leads.** No platform navigation or logo; AgencyHub appears only in the payment fine print, as the processor.
- **\$600.00 and no trace of the \$400.** No provider, no cost, no margin.
- **"After payment we'll ask a few questions"** turns silence into an expectation for a client with no dashboard to check.
- **The expiry date is visible**, the same one the agency picked earlier.

STATES

States before happy paths.

In a product where payment might never arrive, states are the product:

- **waiting for client** : bought, unpaid, the provider cannot start
- Payment link expired without payment
- Cart with no client assigned, checkout blocked with the reason written out
- Switching client with a full cart
- Provider listings in draft, pending approval, published and rejected, with the rejection reason and a way back in

The screenshot displays the AgencyHub interface for Order #34238. The order is for a 'Google MapBoost' service for 'Acme Corp', placed on September 7, 2024, with a total value of \$150.00. The order is currently in a 'Waiting for client' state, indicated by a yellow banner. A message states: 'Acme Corp hasn't paid yet. We emailed the payment link to jane@acmecorp.com on Sep 7. It expires Sep 14, 2024. Alex K. won't start the work until it's paid.' Below this message are buttons for 'Resend Link' and 'Cancel link'. A progress bar shows five stages: 'Payment' (active), 'Requirements', 'In progress', 'Delivered', and 'Approved'. The 'Payment' stage is highlighted with a brown dot. To the right, a 'Payment' summary table shows: 'Your cost' at \$400.00, 'Client price' at \$600.00, and 'You earn' at \$200.00. Below this, the 'Client' information is listed as 'Acme Corp' with email 'jane@acmecorp.com', and the 'Provider' is 'Alex K.', an 'SEO Specialist - Verified'. At the bottom, a 'Google MapBoost' item is listed with a 'Monthly Subscription' and a price of '\$400.00'.

THE SYSTEM

One system behind every surface.

Marketplace, cart, orders, and the provider's store were built from one set of components and layout rules. For a solo designer this wasn't aesthetic discipline; it was the only way to ship four coherent surfaces at once.

The same system absorbed the product's odd states, like orders waiting on a client and listings waiting on approval, without inventing new patterns for each.

WHAT I'D MEASURE NEXT

A design isn't finished when it ships. It's finished when it's measured.

I moved on before the metrics matured, so this case makes no claims it can't back. If the product goes on, two numbers matter most:

- **Share of checkouts that end in a payment link.** It shows whether the third-party flow answers real demand.
- **Provider approval time.** Trust is only a feature if it doesn't strangle supply.
